**BIONESS ANNOUNCES LARGE PRESENCE AND ENTIRE FIELD TEAM ON HAND FOR IMMERSIVE DEMOS AND TECHNOLOGY DEBUTS AT APTA-CSM**

**VALENCIA, CALIF. – February 5, 2015** – Bioness, Inc. will open the American Physical Therapy Association (APTA) Combined Sections meeting as the event’s largest exhibitor, with 3,600 square feet of floor space that allows the company to showcase its entire product portfolio.

“This is a special year at APTA-CSM as we have our entire field team on site making every customer visit a personalized meeting with their local Bioness Representative,” said George Gardiner, Vice President of Business Development for Bioness. “Besides having the latest technology, our local teams allow Bioness to work with all our customers to develop clinical programs, ensure competency and promote utilization throughout the continuum of care including in the community.”

**Hands-On Demos**

Bioness is conducting experiential demonstrations of current and future products. Attendees can take a personal trial of the award-winning Vector Gait and Safety System<sup>®</sup>, so they can see how its innovative design helps patients work on gait training and rehabilitation while maintaining safety. The recently released BITS<sup>™</sup> (Bioness Integrated Therapy System) will be featured in an interactive “Battle of the Bits” competition, where attendees can see how their reaction time and visumotor capabilities stand against their peers. The entire FES product portfolio will also be available for demo.

**“On the Move” with the Bioness Technology Exhibit**

To accommodate more visitors, the Bioness Technology Exhibit will be on site. This 30-foot long “self powered mobile showroom” houses Bioness’ full suite of rehabilitation offerings. Even after the conference, the Bioness Technology Exhibit is available to demonstrate the company’s breadth of products and how they can augment any practice or facility.

**Showcasing Future Innovations Today**

Bioness will also premier exciting new developments currently in the pipeline, including Vector Analytics, a future software package that will enable clinicians to quantify standardized tests like the TUG and 10-meter walk test as well as perform real-time gait assessment. Visitors can also get a preview of BITS Balance: a future integrated hardware and software package to assess and quantify balance.

**About Bioness, Inc.**

Bioness is a leading provider of innovative rehabilitation technologies to help people regain mobility and independence and improve quality of life after injury, illness, trauma or nervous system disorders. Bioness solutions combine best practices and principles of evidence-based

therapy with state-of-the-art technology. Bioness offers treatments to target specific conditions or deficits, and many of these offerings can be integrated into comprehensive rehabilitation programs. Consult with a qualified physician to determine if these products are right for you. Contraindications, adverse reactions, and precautions are available at [www.bioness.com](http://www.bioness.com)
